Part I

First part

Chapter 1

MDBook PDF template

Description

This templates allows you to create fancy PDF documents directly from Markdown sources.

Workflow

1. Firstly, you need to run Podman on your workstation
2. Build `mdbook-local` container image which will be used. Image contains all needed components

```
podman build -f Dockerfile -t mdbook-local .
```

3. Edit following files in `docs` directory
 - **book.toml** - change author and title and do any adjustments you need
 - **src/SUMMARY.md** - Table of content (source document) from which MDBook generates the documentation
4. Run `mdbook_export.sh`
5. Find your new files in `export` directory
